

Change/Fix List

Version 7.2.0.661

#	Description
661	Updated serialization routine to accept only new serials.
660	Fixed Migration tool to accept extended letter like German, Norwegian etc.
658	Fixed problems with decimals.
656	Max Memo Length updated to 65535 from 32000
654	Updated to Label alignment.
653	Fixed corrupted stack that caused GPF.
652	Problem with integer numbers fixed
650	Multiuser problems fixed so conflict with use of one serial will not occur.
649	Alignment of labels updated to work with vertical alignment.
648	Enable possibility for parallel installation of DataEase. Disable upgrade opportunity from old versions.
647	Restructured code and installation for preparation of first real 7.2 release.
645	Fixed flickering in catalog caused by tooltip on all objects.
642	Make catalog window same size as main windows - toolbars etc. Removed annoying flashing tooltip from catalog.
641	Bug 1179 (Tab control shows the fields belonging to other tab) is fixed
640	Bug 1178 (Not all field are displaying in table view) is fixed
639	Bug 1180 (Not possible to set sub form over other objects) is fixed
638	Bug 1182 (Form/record label's font is too big) is fixed
636	Problem with truncating long names in Relationship form is fixed
635	No Output for DQL is implemented. DQL will now exit and terminate when Exit is executed in DQL Script.
630	Fixed openprocedure the same way as opendocument by using the global variable used for opendocument:
627	Fixed up the dataease.ini file to turn off AutoLayoutOnCompile and Turn on AlpabetizeList
623	Changed parting to always use. As decimal separator end ignore 1000 separator. Done by the quick fix code already (but commented out) in the expr parser function in DLEXP1.CPP. We need to clean up the code later. This imposes an overhead since we copy t
617	Fixed the DocumentOpen function instead to work with post instead of send by using a global var to store the name (this is a quick hack till proper signaling is implemented)
615	New help url and a lot of action functions changed for PostMessage to SendMessage
613	Predefined export name argument is added to DataExport function definition
612	New Layout and design for 7.2 implemented.
581	Merge back some newer fixes to handle virtual fields and revert some fixes to not touch the DQL functionality.
576	The problem with lost virtual field names is fixed
574	Functionality for control of changes in projected columns list os changed
568	Memory leak fix is improved
567	Some memory leaks are fixed
566	Change request 1174 (add possibility to project temporary variables to body) is implemented
564	Different default styles for different objects are added.

Change/ Fix List DataEase 7.2.0.661

563	Toolbar placement is changed, DT by default is located on left, all the other on top
562	Change request 1172 (Revise toolbar in DQL editor) is implemented
561	Algorithm of layout generation for DQL is changed
560	Default locking on new applications changed to Network Basic Print to Record and None
559	Change request 1171 (Remove object and event lists if editor is started for DQL) is implemented
558	Algorithm of layout generation for DQL is changed; unnecessary dialog is removed
557	Problem with migration of procedures using table names with symbols from extended char set is fixed
556	Problem with migration of choices using symbols from extended char set is fixed
555	Bug 1170 (Procedure layout - temporary variables are losing) is fixed
554	GPF during layout creation is fixed
553	Bug 1169 (Table and form names using symbols from extended char set are migrating with mistakes) is fixed on De7 level
552	Bug 1169 (Table and form names using symbols from extended char set are migrating with mistakes) is fixed on Migration utility level
551	Update in dataease.ini to give auto layout in dql better default
550	Bug 1168 (Can't enter numeric string if first character of string format is a character) is finally fixed, formatting of numeric strings is corrected in prism
549	One more change in fix bug 1164 (Click event handler does not work if any field in the form is editable)
548	Rename of a few catalog names in deres
547	Bug 1164 (Click event handler does not work if any field in the form is editable) is improved
546	Changed the font in decatalog to new standard font
544	Bug 1168 (Can't enter numeric string if first character of string format is a character) is partly fixed, now cursor is moving to first correct position
543	Bug 1167 (Select Records) is fixed
542	Bug 1165 (GPF when pasting object) is fixed
541	Bug 1164 (Click event handler does not work if any field in the form is editable) is fixed
540	Fix up the not working user locking setting for printer that is not working properly in the application settings.
539	Cannot change user view locking in application settings fixed. Problem due to mismatch between dialog code and prism values. Fixed the dialog values to match prism.
538	netinit and netdinit fix for buffer allocation reset problem when switching between full and single user
537	Fix to lockout problem when opening application due to auto reorganize rdrv file (no auto any more). Fix to locking problem with install routine due to an auto refresh of the catalog. Added option to turn off auto refresh in app update routine with default
536	Saving of non-compiled scripts is implemented
535	Fix to show the actual used Locking strategy in the application preferences Application Data Administration instead of what's in the ini file.
534	Moved reading application config to before checking for multiuser mode. Done to avoid skipping any locking when Workstation in Single User mode and application in locking mode. Had to replicate init and deinit code for network in prism for the DPOpenRepo
532	QueryCloseForm event handler is implemented
531	GPF when parsing OML for forms is fixed
530	GPF during copy-paste of objects with OML is fixed
529	Added handler to prevent GPF when DB block is corrupted
528	FormOpen event handler is implemented

Change/ Fix List DataEase 7.2.0.661

527	FormClose event handler is implemented
526	PreEdit event handler is added to edit fields
525	OML editor can be launched for records and forms
524	Fixed the Document Print Option crash, due to small fixed last temp buffers used. Now calculates needed size and allocate on heap. Also removed dynamic loading of print spooler dll and use the built in Windows version instead.
523	Fixed position to recreate form layout
522	OML scripts form records and forms are allowed
521	Memory problem is fixed, default Insert key switch is moved to application level
520	One more GPF when working with DBR is fixed
519	GPF when working with DBR is fixed
518	Default status of Insert key is set to On in OML editor
517	Bug 1163 (Massive memory leaks after OML edition) is fixed
516	Closing of OML editor form does not close the form
515	Reintroduced the migration tool in the installation routine
514	Fixed up New folder on new app and start folder for Delete app in the new open dialog. Added support for migrate on the new open dialog and updated version number to 7.5 in demigrate.
512	Bug 1161 (Tabs - Problem with select all tab object instead of just current tab) is fixed
511	Custom Layout Missing a scrollbar in auto layout fixed
509	Context related help basing on on-line search is implemented
504	Local help is replaced with on-line
503	Added new dialog for OLE and multibox relation dialog
501	Dialog elements for making dols look better.
500	OLE functionality is restored, namespace for OLE1 is arranged
499	New deres and deresdlg files
498	New styles and a directory with the old for compatibility with old applications.
497	Update User forms etc.
496	Updated default grid pr unit from 2 to 5
495	Bug 1098 (Ticket 24) -Creation of FIELD objects directly on FORM - is improved, problem with creation of virtual fields on tab control is fixed
494	Side effect of moving Font line up in presentation dialog is fixed
492	Update to new set of icons for design elements in dols and deres.dll
491	Ticket #39 (Locking Options problems: IMPORTANT) is fixed
490	Ticket #17 (Tooltips missing on object palette) is fixed
483	Ticket #27 (Removing DataEase from Caption in RT) is fixed
482	Fixed startup image and new expire dialog
479	Old (6.52 and 7.1) labels updates to DE 7.5 behavior
478	Relative text offset is changed to absolute in checkboxes
476	Painting of check boxes and multibox is synchronized in to other fields and labels
475	Size-to-fit procedure is improved, now the width is the same for multi and single line objects
474	Painting of labels, edit and list boxes is synchronized in DT-RT and between each other; bug 1160(List box redrawn wrong when scale is big) is fixed
469	Fix for ticket #29 (Alignment of LABELS! IMPORTANT been wrong ALWAYS) is improved, behavior of labels

Change/ Fix List DataEase 7.2.0.661

	and edit fields now is the same what other objects have
466	Rewrite of Open dialog to support switching between different modes without problem. Support for delete and rename. Update of recent files to support all modes.
465	Bugs 1144 (Wrong table view template generation if more then 1 record in a form) and 1143 (Heap memory error when form with 3 records switches to table view)
464	Added support for adding tutorial and samples to the welcome dialog after copying the files to the users private DataEase catalog. Added 5 almost empty samples and an empty tutorial to the sample directory and added samples to the installation routines.
461	Bug 1098 (Ticket 24) - Check for duplicated names is added
460	Potential GPF s fixed
458	Updated open dialog with the new choices and with the current graphics. The Delete and Rename not implemented properly yet.
457	Bug 1098 (Ticket 24) -Creation of FIELD objects directly on FORM is improved, now it is possible to change field names
456	Updated the open dialog to work with recent files. A more modest design (not finished as it needs better bitmaps and alpha blend of colors).
455	Bug 1098 (Ticket 24) -Creation of FIELD objects directly on FORM is improved, now Form Virtual field's definition can be edited
454	Added preview to Welcome dialog. Moved the rdrv definitions used both in welcome and in open dialog to a file to avoid two versions of the structures.
449	New Welcome screen with support for application links. Some work remaining on recent application, only first in list working.
448	Bug 1098 (Ticket 24) -Creation of FIELD objects directly on FORM is fixed
447	Default length for text field is changed to 40
446	Mechanism of copying app preferences from dataease.ini to app.ini is added.
445	Show rulers if default settings for them is On
444	Default settings for "Rulers and Grid options" dialog are changed
443	Added support for dynamic reload of open dialog, added support for Open, Samples and New. Some problem reloading information on application when switching mode without changing folder.
442	Bug 1096 (Ticket 11) Grid/Ruler - Fix metric misalignment due to wrong computation - is fixed.
438	Added preview of styles. Use name of style as in dropdown and png, jpg or bmp as extension and add the file to styles directory to get it to work. Three dummy bitmaps added where one is for when no file found (name=noimagestyle.png)
437	Fix to enhance open and new dialog to look more modern and being able to preview applications and show description for applications using rdrvXaaa with png, jpg or bmp for preview and txt for description. The X is the app letter.
436	Ticket 23 (bug 1092) is fixed on DataEase side
432	Default state of labels and titles in sub form layout is changed to off
427	Cosmetic changes - combo button is improved in listbox and multibox
426	Ticket 1 - CR 1090 (Default <None> Style in 7.5) is implemented for all objects exclude sub forms
425	System font is changed to "Trebuchet MS" by new resource editor tool
422	Bug 1089 (GPF when sub form is generated with "Like original form" layout) is fixed for styled sub forms
420	Bug 1087 (Objects in sub forms are not styled to default style) is finally fixed
419	Bug 1088-Ticket 16 (Dialog redraw problem in field definition when creating a relationship) is fixed, source table name is moved to left side of Relationship Definition dialog
418	Bug 1087 (Objects in sub forms are not styled to default style) is fixed for sub form heading
416	Bug 1086 - Ticket 7 (NONE Property overridden when editing on Display) is fixed
414	Bug 1069 - Ticket 18 (Field rename corruption when field are used in Sub Form) is fixed

Change/ Fix List DataEase 7.2.0.661

413	Some limits are corrected
412	Bug 1068 - Ticket 4 (Sub form does not take DEFAULT styling) is fixed
410	Bug 1067 (Tab control - problems with default styles) is fixed
409	Change request 1066 (Tab control - start Display dialog from tab definition dialog) is implemented
408	Tab control definition dialog is updated
406	Change request 1050 (Tab control - remove pause in edit definition dialog) is implemented
404	Potential memory leak during copy-paste of Tab controls is fixed
403	Fix for bug 1033 (Objects belonging to tab control can be moved out of it) is revised, fix for bug (Tab control - Ownerless tab item after copy-paste of group) is added, functionality of copying child objects of tab control is implemented
402	Fix for bugs 1043 (Tab controls - GPF if form with tabs have been saved incorrectly), 1046 (Tab controls - copy/paste does not work correctly) and 1047 (Tab control -> GPF during addition of new tab item) is implemented
399	Bug 1034 (Tab controls - GPF if form with tabs have been saved incorrectly) is fixed, error handler is added
398	Warnings are fixed, outdated str functions are replaced with recommended in MSVS2005.
395	Debug assert is fixed (call of non-initialized catalog)
394	Bug 1033 (Objects belonging to tab control can be moved out of it) is fixed
393	Change order of the commands in DQL (demessag.msg file) to reflect most used functions first.
392	add back support for DENAME in environment, to satisfy Citrix users that share the same machine name and prism.ini
391	Added deres.dll to require and removed the file from project. Source still there in case. Added new icons to all dols. New look implemented in deres.dll.
390	Open application is now default when starting DataEase
389	Fixed the look on DQL editor header, so it not is misaligned. Removed the ugly background.
388	Updated release notes that shows up in left pane.
383	Added manifest definitions to the top of the deres.hpp to get XP look in dialogs and dialog elements.
382	Fixed a problem with zoom and new no blinking fix.
381	Partially fix for blinking when navigating in forms in Run Time mode. Do only work when not using scrolling. An if checks if you have used scrolling and use the old update if you have. Needs to investigate more of how to do the background painting when in
380	Change ruler to white background. Changed font on rulers from stock font to Trebuchet MS 6pt and added 2pt space before writing the font.
379	Change request 1022 (create relationships from Field definition dialog) is improved; now DE starts Relationship definition dialog for new relationships.
378	Added delnitFirstTimeStartup to the init sequence that sets the default directory for applications to My Documents\My DataEase and creates the directory
377	Automatically select Default as style when creating new applications.
376	removed annoying dialog on new object in design mode but keep the possibility to show them on right click and double click
375	Updated look on application icon, welcome and resources
374	Removed old styles and added a new default style. Added new startup.tif and all the extra dil files to handle all graphical formats
373	Fix to look for images in "DataEase application path\images"
372	Changed the default mode on a edit field from select text to not select text in ini file and in default setting
370	Taken away the red frame around the edit box when the fields have focus.

Change/ Fix List DataEase 7.2.0.661

369	Changed default on open Catalog from normal to maximized
368	A fix to glue the object palette to left of the screen when starting up in design time
367	No need to tell users that we default to English when no language.dll is found, so MessageBox removed on init
363	Code ported to Microsoft Visual Studio 2005, OLEDB and WebPublisher are moved out of build.
362	Cosmetic changes, unused code is removed
361	Bug 1032 (Multibox - wrong choice line when one of drawn fields is empty) is fixed
360	Bug 1031 (Allow free input flag is disabled when creating new field) is fixed
359	Change request 1030 (split Override checkbox to "Allow free input " and "Show al records ") is improved; now relation criteria does not copy to base field for fields with Show All Records flag
357	Bug 921 (Problems with lookups) is finally fixed - addition
354	Bug 1029 (Multibox - wrong data retrieval and other problems) is fixed
352	Change request 1022 (create relationships from Field definition dialog) is improved
351	Change request 1022 (create relationships from Field definition dialog) is implemented
348	Cosmetic changes : potential problem with data type mismatch is fixed, destructor for DECMemoArray is added, empty operator is removed
347	Memo fields : memory leaks found during fix of bug 974 is fixed
346	Bug 972 (Memo field crashes when field data is modified) is fixed
345	Change request 973 (Revise function list in listbox during derivation/dql edition) is implemented
344	Memory leak during export is fixed
343	Bug 950 (Wrong export->import of MEMO fields via procedure) is fixed, some potential bugs during export are corrected
342	Some troubles with memo fields (signed-unsigned mismatch, GPF in table view, conflict between length and MaxLen) are fixed, record length is limited to 32 K
340	Bug 943 (Problems creating Radio) is improved, fix for edit is changed
338	Bug 913 (The "upper" function no longer works in 7.1) is improved
337	Bug 913 (The "upper" function no longer works in 7.1) is fixed
336	Bug 947 (DataEase will produce GPF when logged into the catalog with Medium 1) is fixed
335	Bug #864 (A pre-Installed printer drivers required to run export procedures) has been fixed.
334	Bug #924 (Data in 652 memo fields is not migrated to 7.1) has been fixed.
330	Bug #942 (CopyAll and Enter a record take too much time more than DE652 with the same piece of code) has been fixed.
326	Bug #816 (Assigning temp variable (Date) equal to data entry field leading to wrong results in listing)has been fixed.
325	Bug 943 (Problems creating Radio) is fixed
324	Bug #941 (Application variable not working) has been fixed.
323	Bug 944 (Problem with the Memo Field) is fixed
321	Bug 915 (error message: "Please close and reopen the document" while the output of any report is sent to printer) is fixed.
320	Bug 925 (DE crashes) is fixed
319	Bug 940 (Running a procedure from a button click even will produce GFP) is fixed
318	Bug 933 (Printing multibox field from DataEase 7.1.311 is not working) is fixed
316	Bug 817 (Multibox field remain colored during selection un table view) is fixed
315	Bug #902 (Behavior of menu and toolbar items responsible for displaying/hiding of rulers on a form is inconsistent) has been fixed.

Change/ Fix List DataEase 7.2.0.661

314	Bug #901 (Behavior of menu and toolbar items responsible for displaying/hiding of grid on a form is inconsistent) has been fixed.
313	Bug 819 (Multibox including list boxes get data in wrong way) is adjusted
312	Bug 852 (Printing a report with multibox field does not show its value) is fixed
